AYAMULLAH KHAN

Full-Stack and AI Engineer | Go, TypeScript, Python

Delhi, India | ayamullahkhan04@gmail.com | +91 8530044774
LinkedIn: linkedin.com/in/ayam04 | GitHub: github.com/ayam04 | Portfolio: ayamk.in

SUMMARY

Software engineer with 3 years shipping production systems end to end in Go, TypeScript and Python, from data model and API design through deployment and monitoring. Built 0 to 1 at three early-stage startups: an AI learning platform on a Go backend reaching 10,000+ students, agent orchestration processing 15,000+ submissions, and real-time voice AI at 1.5-second latency for 500 daily users. Now consulting for HRtech, Edtech and services clients, with a multi-tenant SaaS ERP and a restaurant POS in production and 18 merged upstream pull requests in Go, Python and TypeScript. Author of fya, an open source security scanner with 800+ downloads and 42 GitHub stars.

SKILLS

Languages: Go, TypeScript, Python, JavaScript, SQL, Dart

Backend and APIs: Go (Cloud Functions, Cloud Run), Node.js (Hono, Next.js), FastAPI, REST and OpenAPI-first design, oapi-codegen, webhooks and idempotency, background workers, asynchronous processing

Databases: PostgreSQL, SQLite, Drizzle ORM, schema design, incremental migrations, indexing, row-level security, MongoDB, Firestore, vector search

Frontend and Mobile: React, Next.js, Vite, Tailwind CSS, Flutter

AI and LLM Engineering: Agentic workflows, RAG, embeddings and re-ranking, LLM evals, prompt engineering, OpenAI API, Google Gemini API, LangChain, Whisper, speaker diarization

Cloud and Infrastructure: AWS, GCP (Cloud Run, Cloud Functions, Firestore), Docker, Railway, Vercel, Cloudflare R2, GitHub Actions CI/CD, Sentry

Engineering Practice: Go testing, pytest, vitest, test-driven development, code review, technical design docs, Claude Code and AI-assisted development

WORK EXPERIENCE

Founding Engineer and Software Consultant, oorik Technologies — Jun 2026 - Present
Delhi, India (remote clients)

- Consult for HRtech and Edtech clients on LLM features and backend services, taking scoped work from technical design through deployment and monitoring.
- Built **oorik ERP** (erp.oorik.in), a multi-tenant SaaS ERP for Indian SMBs, from an empty repo to production: Hono API on PostgreSQL with Drizzle, **22 incremental migrations** including row-level tenant isolation, Better Auth organisations, Razorpay subscription billing, **200+ vitest files** gating CI, deployed on Railway and Vercel.
- Delivered a restaurant POS, kitchen display and online ordering stack for a Noida quick-service restaurant as a fixed-scope contract: Turborepo monorepo of **13 packages**, GST-correct pricing engine, Razorpay UPI and Pine Labs card-terminal integrations, WhatsApp receipts with a retry worker, idempotent webhooks, Sentry error tracking.
- Contributed **18 merged pull requests** upstream to hflow, Orbit and RAGFlow, with 13 more open across Keploy (Go), LlamaIndex, google-cloud-python, Hoppscotch, Chatwoot, Documenso, Omnivore, Onyx and Unstructured; each a root-caused fix or feature shipped with regression tests.

Software Development Engineer, myAIcademy — Feb 2026 - Jun 2026
Hybrid, Dubai, UAE

- Owned a Flutter and web AI-learning platform end to end, from Go backend services through release, reaching **10,000+ students onboarded and 50,000+ learning sessions**.
- Worked across Go services on Google Cloud Run and Cloud Functions with Firestore behind an OpenAPI-first REST API (**70+ endpoints** generated with oapi-codegen) and Dockerised Python content services.
- Built a course automation pipeline that generates and ships persona-targeted courses **within a 72-hour SLA** of a new AI tool launch, replacing a fully manual authoring process.
- Built the customer outreach system on Customer.io, lifting user retention by **8%**.

AI Engineer, Peach May 2025 - Jan 2026
Delhi, India

- Led AI backend and agent orchestration for a learning platform, processing **15,000+ submissions** in production.
- Built an automated grading system that scored **5,000+ worksheets at 92% rubric accuracy**, removing manual review from the critical path.
- Shipped image and video analysis pipelines adopted by **20+ NGO partners** for field-submitted media.
- Engineered live agentic workflows with multi-turn context management that generate personalized learning paths, cutting manual intervention per session by **60%**.

GenAI Engineer, HYRGPT May 2024 - May 2025
Remote

- Built a production voice AI assistant handling real-time Hinglish conversations at **1.5-second end-to-end latency for 500 daily active users**, used live in recruitment screening calls.
- Cut LLM inference cost by **60%** by introducing a RAG pipeline over curated datasets, custom scrapers, and prompt iteration driven by offline evals.
- Implemented a resume retrieval and ranking system using vector embeddings with metadata filtering and relevance heuristics, returning recruiter shortlists in real time.
- Designed a speech-to-text and summarization pipeline with speaker diarization and asynchronous inference, cutting transcript turnaround by **70%**.

AI Research Intern, Sultan Qaboos University Jun 2024 - Aug 2024
Muscat, Oman

- Developed a career recommendation system combining psychometric signals, structured user data, and LLM reasoning, evaluated across cultural contexts with multimodal inputs.

Research Intern, CSIR-IHBT May 2024 - Jun 2024
Palampur, India

- Built a React clinical analytics dashboard for Alzheimer's screening experiments, pairing real-time visualization with authenticated access to patient-level data.
- Optimized the lab website across frontend and backend, improving page-load performance by **60%**.

PROJECTS

fya, open source application security scanner Python, PyPI
fya.ayamk.in | github.com/ayam04/fya

- Built and published a dynamic application security scanner (DAST) to PyPI with **58 checks** mapped to the OWASP Top 10, OWASP MASVS, and CWE, scanning running servers, Android APKs, and source directories from one command.
- Grew adoption to **800+ downloads and 42 GitHub stars**; orchestrates Nuclei, Nikto, sqlmap, nmap, and testssl when present, emitting SARIF, HTML, and JSON reports with CI-ready exit codes.
- Maintained it as a production package: Docker image, a 14-module pytest suite with coverage, and three GitHub Actions workflows covering CI and automated PyPI publishing.

tech-doc-ocr, document delta and grounded chat over drawing revisions Python, OCR, LLM
github.com/ayam04/tech-doc-ocr

- Ingests native PDF, scanned PDF (OCR) and DXF revisions of engineering drawings behind one adapter interface, computes a located, confidence-scored delta, renders a redline overlay, and answers questions over both revisions with citations.
- Eval harness gated against a committed baseline: **0.91 precision at 0.97 recall** on production P&IDs, 100% grounded answers with zero invalid citations over the labelled question set.

EDUCATION

B.Tech in Computer Science, Manipal University Jaipur Jaipur, India

Diploma in Data Science, Indian Institute of Technology Madras Online
